Dry weight: **85kg!!!!**

Max. PAX: 7

CE Category: C

Max. power: 30HP

Speed: 30kn+

Price: starts from 17,470.59€ net

Travel in style.

Meet the ASTender 400 Center Console with its full carbon fibre construction, because performance matters and the future is lightweight. ASTenders are high-performance boats, built on the **highest standards** in composite production: They are robust, durable and highly efficient.

The rigid carbon construction is **lighter than any RIB** on the market. The construction will neither deflate or age in the sun. Its gelcoat is as easy to care of as on any GRP boat. The high-quality commodities used ensure longevity with a minimum of maintenance.

The stiff hull with its optimized shape **needs 35% less power than a RIB** and though creates less emissions. Also it can be perfectly propelled with an electric drive.

The extra buoyancy, of the foam sandwich and the waterproof compartments, makes the ASTender unsinkable. The absence of inflated tubes makes the ASTender the **most spacious tenders you will ever have used**. Which other tender in that length can claim to have such a large sunbathing area?

The wide hull shape provides enormous stability and allows easy boarding. The high freeboard with the deep V keel offers **dry and comfortable rides**, making it the perfect companion for all your endeavours.

Customize your tender: Thanks to the modular design of the ASTender 400, the customer can choose between several deck layouts. That's tiller or remote steering, different (or actually no) consoles and several options.

Quality 100% made in Germany.
