

VIRTUE

SET THE TREND

# VIRTUE V10

The smoothest and most sustainable daycruiser on the market. With a fixed t-top for permanent protection from the elements, this beauty boasts many features for active relaxation and on water fun, while using every trick in the boat building book to be more efficient and ecological.

The V10 is a high-tech, low-carbon yacht for ecoconscious consumers who expect the most contemporary products on the market and also care about tomorrow's planet.

Combining its highly spirited character with luxury standard equipment and quality, the V10 is inspired by Italian style, boasts highly efficient Swedish Petestep® hull technology, and powers through waves using Norwegian electric EVOY outboards (as one of the engine options).

## HULL TECHNOLOGY

An analysis of the interaction between the water spray and the boat made it possible for Petestep® to design a hull which surrounds the water line with so-called deflectors.

The deflectors harness the energy of the water spray, redirecting it downward and aft, reducing drag by 10- 30% and increasing acceleration by 20-50%.

Concurrently, noise from water pushing against the hull is significantly reduced. The technology provides a more stable ride and lower fuel consumption compared to conventional hulls.

The V10 hull design pledges to minimize drag and motion and maximize efficiency and smoothness when cruising the waters at planing speeds.

It reduces energy consumption up to 35%, enabling smaller engines for the same cruising experience, similar to larger units. Depending on the selected engines the V10 achieves a top speed of over 50 knots and cruising speed between 20 and 40 knots.
